

# CHECK POINT SMB SECURITY SUITE

Powered by Quantum Spark & Harmony

## INSIGHTS

Since the beginning of the pandemic, the remote workforce has grown exponentially and surfaced new challenges for businesses. In the age of the remote workforces, small and mid-sized businesses (SMBs) often struggle to get the right security, but with the right solution this struggle isn't necessary. The ideal solution should be safe and must effectively and efficiently provide secure access to critical resources from any device, anywhere, and at any time, while minimizing the risk of a data breach.

## INTRODUCTION

Despite the worldwide impact of the pandemic, SMBs continue to grow considerably in size. Many SMBs are moving to a geographically distributed topology and adapting a hybrid work model by allowing their employees to work from home.

Cyber criminals specifically target SMBs as they are regularly known to possess a broad attack surface with fewer security controls in place.

**Fact: 54% of attacks on SMBs results in a breach.**

Cyberattack surfaces for SMBs are only expanding due to the popularity in migration to work-from-home business practices, adoption of IoT devices for professional use, and incorporation of cloud services.

**Fact: 81% of SMBs don't have a dedicated IT team or relevant security personnel to address security challenges and pain points.**

## THE TOP 5 SECURITY CONCERNS FOR SMBS

1. Inadequate equipment and increased cybersecurity risks within shifting borders
2. Shadow IT and compliance
3. Cyber security awareness and skills gap for maintaining good security hygiene
4. Adaptation of IoT and “smart” devices expanding the attack surface
5. Data Loss Prevention (DLP) across all devices (including cloud solutions)

## SMB SECURITY LANDSCAPE

What’s worrisome is that any given SMB may think they are not a target. However, the truth is that the “virtual front door” on the Internet is only 500 milliseconds away from every hacker in the world. Hackers are now targeting smaller companies that don’t have all the protections, staff, monitoring or awareness that the big corporations have. As a small business owner, partner, or key employee, you are probably aware of some of the challenges in achieving “Enterprise-Grade” security: cost savings vs. needing robust security, lacking the experience in staff to manage, monitor and maintain, while lacking the resources to put it all together. SMBs require security solutions just as strong and flexible as their large enterprise counterparts, with all the same capabilities and comprehensive central management and visibility tools, but at a lower cost more in line with SMB budgets.

## CHECK POINT SMB SECURITY SUITE

Check Point Software has designed a unique, comprehensive security solution suite specifically built for SMBs. The suite removes unnecessary obstacles associated with trying to make the right security decision. The SMB Security Suite delivers effective security in a series of simple and affordable security solutions that protect SMBs employees, networks, and data from cyber-attacks.

What's included in the suite?

### Quantum Spark

Quantum Spark security gateways feature best-in-class threat protection that is easy to deploy, manage and maintain. Communication and security is integrated into an all-in-one security device with “out-of-the-box” security settings and top notch Threat Intelligence.

### Harmony Email & Collaboration

Harmony Email & Collaboration offers complete protection for SMBs cloud email and collaboration applications. Protecting SMBs against malicious activities like Phishing, Malware, Data Loss & Leakage and Account Takeovers.

### Harmony Endpoint

Harmony Endpoint prevents threats to the endpoint like ransomware, phishing or drive-by malware, while quickly minimizing breach impact with autonomous detection and response. Automating 90% of remediation tasks, Harmony Endpoint offers speedy recovery.

### Harmony Mobile

Harmony Mobile offers app protection, network protection and OS & device protection. The solution is user friendly with Zero Impact on user experience or privacy. It provides SMB mobiles and tablets with the strongest security posture.

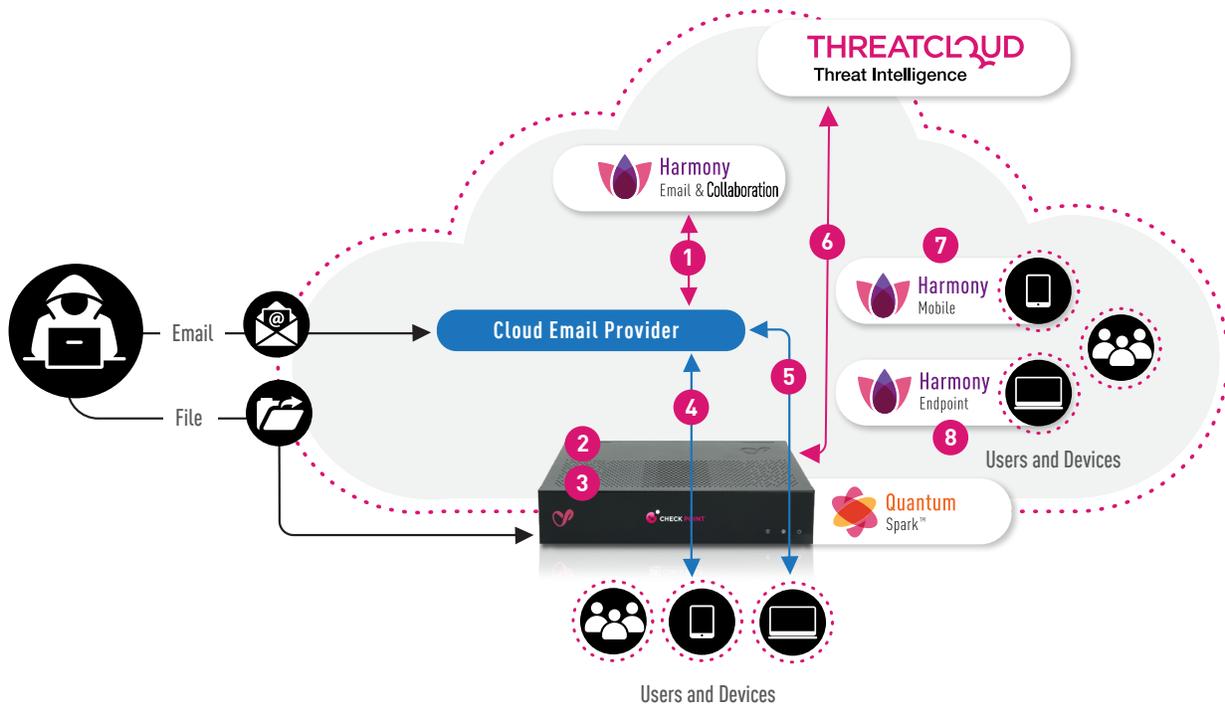

Enterprise grade network security, highly integrated, and easy to manage

Innovative email & collaboration app protection

Endpoint protection for PC, Mac, Linux, Android, and iOS with automated incident response

- 1 API based email security
- 2 Threat Intelligence powered known attack prevention
- 3 Threat Intelligence powered zero-day attack prevention
- 4 Secured email access over https
- 5 Secured Internet access
- 6 Zero-day protection Threat Intelligence
- 7 Mobile device protection against known attacks and zero-day attacks
- 8 Endpoint device protection against known attacks and zero-day attacks

---

“We differentiate ourselves from other MSPs by giving complete, best-in-class, SMB security by using the SMB Security Suite products”

– Greg Tanner CEO

---

## CONCLUSION

Running a small business requires dealing with an immense number of issues from competition to scheduling, payroll, banking and collections and the new one: supply chain issues. However, once you add security challenges to all of the above, it is just too much to handle: No Security Experts on staff, having to monitor security issues 24/7, compliance reporting requirements, and the desire and goal to have security as a competitive differentiator. All SMB assets must be secured with appropriate security controls. By addressing the “Zero Trust” principle, SMB’s don’t have to worry about the lack of administrative resources on remote locations, patching and upgrades, the layered approach and portable devices. Check Point SMB Security Suite enforces access control, prevents attacks and threats, and protects business data, all while providing insight and visibility. It’s easy, fast, agile, and effective. Read more about how to use Check Point SMB Security Suite to address these challenges with the best ROI (Return on Investment) and a low TCO (Total Cost of Ownership).
